For questions and/or returns, please visit our policy page at www.cakestackers.com

Screw a 4 inch threaded rod into a 1.5” ***threaded*** spacer. Slide on one Topsy Turvy angled spacer with the angled side facing up.

Slide on the correct size plate you intend to use for the tier you are working on.

Take another Topsy Turvy angled spacer with the angled side facing down to “sandwich” the plate. Slide a 1.5 inch ***non threaded*** spacer onto the rod.

You will use the remaining portion of the 4 inch rod to connect a 1.5” ***threaded*** spacer which will begin your center post that should be built to the height of your cake tier. For more information on how to properly build a center post, please visit www.cakestackers.com/videos and watch the video titled “Assemble Center Post.”
