

Hanging Chandelier Assembly Instructions

Please read **completely** before building your cake!

First Pre-assemble your center posts according to the height of each cake tier you will be building. Also remember to screw in your 1” threaded rod to your center post. (please visit our website www.cakestackers.com to view an easy center post assembly video)

Start with your smallest piece (top cap), which will be your bottom tier. **Be sure that the nut on the top cap is facing down.** Take your center post (that is already assembled) and screw it into the top cap by hand tightening, being sure that the rod screws all the way into the nut on the top cap. Next take your cake (that is placed on your Cake Stackers Pre-Cut Cake Board) and slide it over the center post. Some cake will spill over as you push your center post through, simply brush this excess off and discard.

Take your next Cake Stackers Cake Plate and slide it onto the 1” rod (that you previously screwed into your pre-assembled center post), then screw your next center post on and hand tighten. Slide your next cake over the center post.

Repeat for as many cake tiers you plan on assembling.

When you get to your final or top tier, slide your cake on and please be sure your center post is slightly **TALLER** than this tier as you will need to screw your hanging bolt tightly into the top. This means your center post for your top tier cake will be poking out of the cake only enough to screw your hanging bolt into the center post.

Hang from your choice of stand and there you have it! Happy Baking!
